

A great way to make your Ride stand out is to paint the calipers. The G2 brake caliper paint is available in the following high gloss colors: **Red, Yellow, Blue, Silver, Black and White**. Two-part paint system does not require caliper removal.

The G-2 Manufacturing brush-on Brake Caliper Paint System was developed to show off a vehicle's brake components while giving the look of expensive, high performance calipers or brake drums.

The Paint System Set provides sufficient materials to paint 4 brake calipers, or 2 brake calipers and 2 brake drums. However, vehicles with large brake calipers on the front axle and large brake drums on the rear axle may require two complete Paint System Sets to assure complete coverage.

Paint System Sets must be used between 56-70°F ambient temperatures and have a shelf life of six months. Higher temperatures will cause paint to harden faster than normal. Once the paint and reactor are mixed, there are only 2-3 hours working time. After that, paint left in the can will harden and will not be useable. Make sure that you have ready to paint once you've mixed the paint. Do not paint the mating surfaces where the road wheels attach to the brake drums. The wheel's mounting hub diameter
